Assumption map · Smart reminders

D **Desirability** · does anyone want it?

F **Feasibility** · can we build it?

V **Viability** · does it work for the business?

A **Adaptability** · can it cope with change?

Test card

TEST CARD

1 HYPOTHESIS *What must be true?*

We believe clients pay sooner when they're reminded near their usual payment day.

2 TEST *How will we test it?*

Concierge test: for 4 weeks, the support team schedules reminders by hand for 40 volunteer businesses, each timed to the client's usual payment day.

3 METRIC *What will we measure?*

On-time rate on invoices due in the 4 weeks, vs the same businesses' previous 3 months. Plus reminder opt-outs.

4 CRITERION *We're right if… (written before the test)*

On-time rate rises by at least 5 points, and opt-outs don't rise.

AGREED BY Maya (CEO) · before the test starts

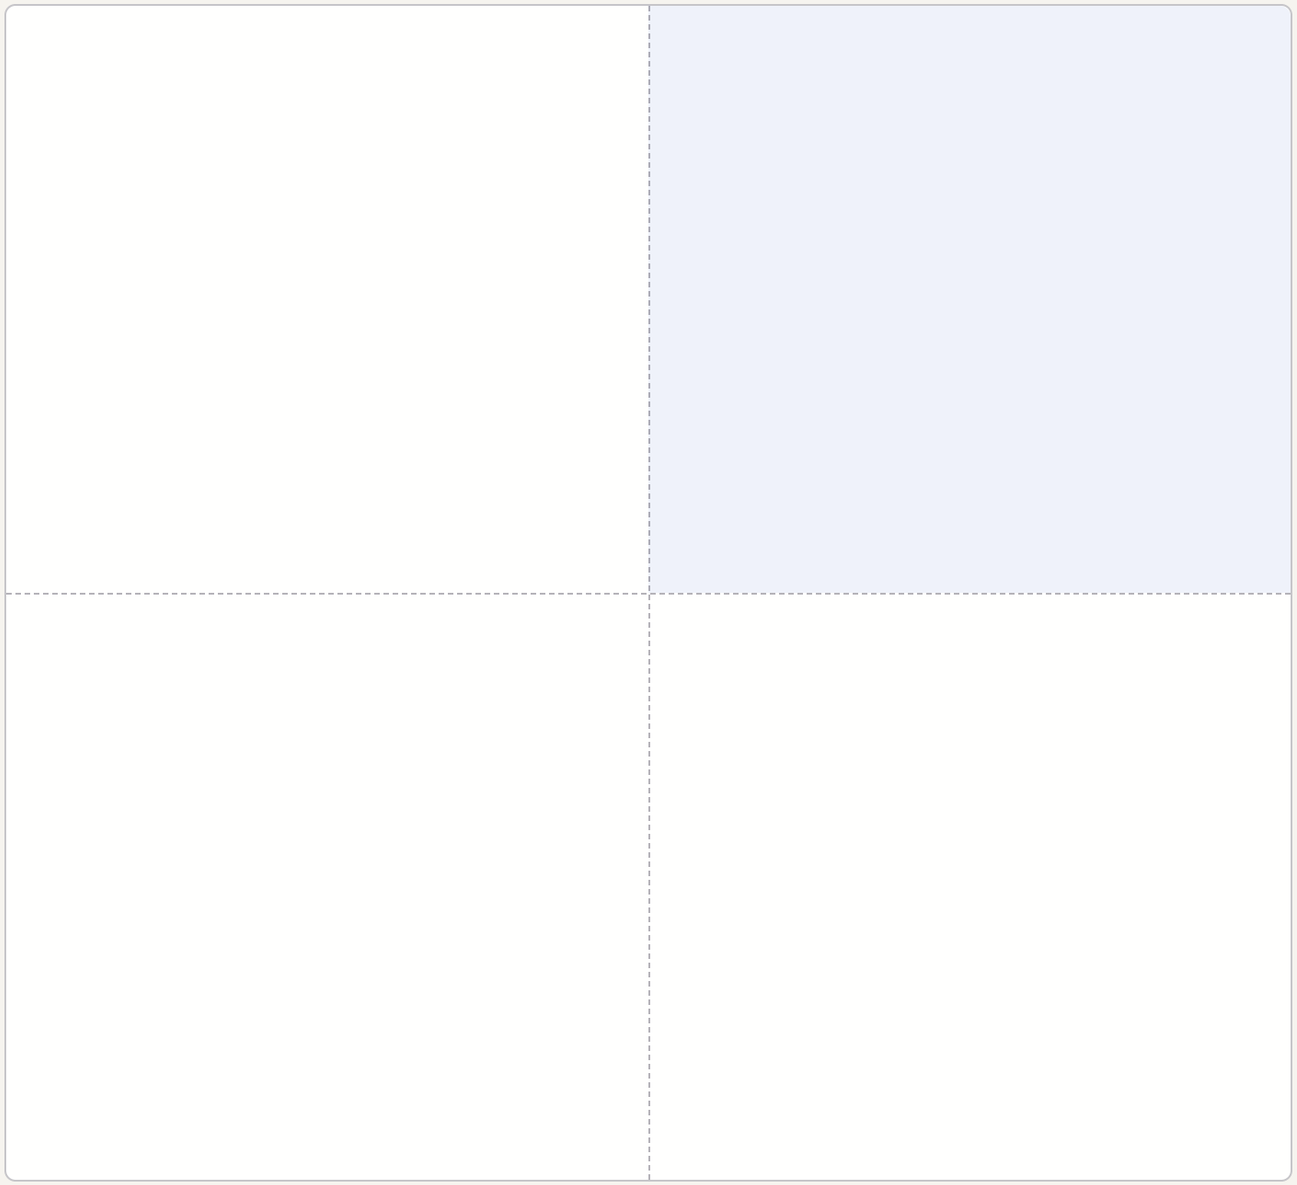

Assumptions mapping: David J. Bland, Strategyzer, 2020 · Test Card: Alex Osterwalder, Strategyzer, 2015

Tallyrow is fictional; its numbers are invented for teaching.
