Tallyrow's Next Quarter FICTIONAL

Same company, same people, and everything you've learned, all at once.

WHERE THINGS STAND

SHIPPED
Payment link
A "Pay now" link in every invoice. Now Tallyrow's must-have.

SHIPPED
Recurring invoices
Retainers invoiced automatically.

LIVE
E-invoicing
Phase one of the mandate, in the newest market. Customers there can invoice legally.

BUILT · OFF
Smart reminders, minimal
Tested, flat result. Switched off by default.

WHAT LANDED ON YOUR DESK THIS WEEK

WHO	ROLE	WHAT THEY BRING
Maya	CEO	A competitor has just launched "AI reminders", publicly, with a big marketing push. Her message: **"We're behind. I want smart reminders this quarter."**
Daniel	Head of Sales	Multi-currency is back. **Three agencies** now want it, and the newest market's product-market fit survey says the agencies who almost love Tallyrow are asking for it.
Aisha	Compliance lead	A new date. The mandate's next phase, **receiving e-invoices**, starts in **two quarters**.
Tomás	Finance lead	Late fees, again, this time with the guardrail spec you designed: revenue he can see, and a tripwire if trust starts to slip. **Today, complaints are only tracked per invoice, not per fee.**
Priya	Head of Support	No new request. She'll be in the room, and support tickets are part of your evidence.

THE CONSTRAINT

10 person-months

across the three squads, after maintenance, same as last quarter. Everything that is asked for, or that the data says needs doing, adds up to well over 10.

THREE TRAPS

- [ ] **A competitor's launch** changes the cost of delay, if the feature works. It doesn't change your own test result.
- [ ] **The agency hint was unplanned.** It's a hypothesis, not a result.
- [ ] **Two quarters away** isn't far if the work is long. Find the last week you can start.

YOUR JOB: A DECISION PACK IN FIVE PARTS

PART	WHAT IT ANSWERS
1 · The ranked quarter	What do we commit to, and in what order? Two models, reconciled; MoSCoW for the timebox; dates first.
2 · One idea, evaluated	Is the most contested idea worth building?
3 · The metric tree	How will we know the quarter worked? Inputs, and guardrails with limits.
4 · The experiment brief	How do we test the riskiest bet honestly?
5 · The one-page memo	What does Maya need to read before the meeting?

WHERE THE NUMBERS ARE
Every number you need is in the **data pack**, and none of it is new: it is what Tallyrow learned over the last quarter. Work through the written lesson and its worksheet, check your pack against the **scorecard**, then watch the defence.

Tallyrow, its people and every number here are invented for teaching.
