The Data Pack FICTIONAL

Page 1 of 4 · The candidates, their estimates and last quarter's scores.

THE CANDIDATES THE BRIEF NAMES · SQUAD ESTIMATES

ITEM	SQUAD	SLOT · PERSON-MONTHS	DURATION · WEEKS	NOTE
Mandate phase two (receiving e-invoices)	Platform & Compliance	3	24	New. Groundwork this quarter; about 6 person-months over two quarters in all
Smart reminders, full build	Get Paid	4	8	The timing model for every eligible business. The minimal version exists, switched off
Multi-currency	Invoicing	2	4	Invoice and get paid in clients' currencies
Late-fee automation	Get Paid	2	4	The feature itself. See the guardrail page before you plan it
Client portal	Invoicing	6	12	Clients see and pay all their invoices in one place
Receipt capture	Invoicing	4	8	Photograph receipts to log expenses

Capacity: **10 person-months**. Slot = this quarter's share of the work; duration = weeks from start to done. Other pages hold estimates for work the brief does not name, next to the evidence that calls for it.

LAST QUARTER'S SCORES FOR THE ITEMS STILL OPEN

ITEM	REACH	IMPACT	CONF.	EFFORT	RICE	WEIGHTED	COST OF DELAY	PROFILE	CD3	WSJF
Smart reminders	22,000	1	80%	4	4,400	3.35	0-20 (mid 10)	long, peak affected	1.25 (0-2.5)	10.5
Multi-currency	1,500	2	80%	2	1,200	2.25	1.2	treated as steady; really a deal date	0.3	12
Late-fee automation	6,000	1	80%	2	2,400	2.75	4	long, peak unaffected	1.0	8
Client portal	15,000	1	80%	6	2,000	2.20	3	long, peak unaffected	0.25	2.67
Receipt capture	10,000	0.5	80%	4	1,000	1.45	1	long, peak unaffected	0.125	1.5

Last quarter's inputs, not this quarter's answer. Change any input your evidence changes, and write that evidence next to it. Units as before: RICE reach = businesses per quarter, impact on the 3 / 2 / 1 / 0.5 / 0.25 scale anchored to "lift to invoices paid on time, per business reached", effort = person-months; Cost of Delay in $ thousands per week; WSJF on the modified Fibonacci scale.

SMART REMINDERS' RICE HISTORY	SCORE
First pass (confidence 100%)	12,000
Honest confidence, 50%	6,000
After the concierge test: reach 22,000, impact 1, confidence 80%	4,400

WSJF INPUTS	VALUE	TIME	RISK / OPP.	SIZE
Smart reminders	8	5	8	2
Multi-currency	3	8	1	1
Late-fee automation	5	2	1	1
Client portal	5	1	2	3
Receipt capture	1	1	1	2

Weighted scoring used the weights agreed before scoring: lift to invoices paid on time 40%, revenue and retention 25%, strategic or compliance need 15%, ease 20%. If you re-weight, agree the weights first.

MANDATE PHASE TWO · AISHA AND THE PLATFORM & COMPLIANCE SQUAD

FACT	VALUE
What it is	Businesses in the newest market must be able to **receive** e-invoices, not only send them
When it applies	From week 27: the first week of the quarter after next. Ready by the end of week 26
Delivery estimate	About **24 weeks** end to end, including an external testing and sign-off window the squad does not control
Slot this quarter	3 person-months of groundwork; the rest next quarter
Who it affects	The newest market: about 3,000 businesses at about $30 a month each
Cost of waiting	About 0 now. After the date, customers there cannot work legally: about **$21k a week** (3,000 × $30 × 12 ÷ 52)
Phase one, for comparison	Delivered last quarter, started by week 3 for a week-12 date

Smart Reminders: The Evidence FICTIONAL

1 · THE CONCIERGE TEST

VOLUNTEERS · NO CONTROL

Test card agreed in advance: **pass if the on-time rate rises at least 5 points and opt-outs do not rise.** 40 volunteer businesses, 4 weeks; the support team timed each reminder by hand to the client's usual payment day; compared with those businesses' previous three months. About 1,100 invoices: on time **57% → 65% (+8 points)**; opt-outs 0.2% against the usual 0.3%. **Passed.** Caveats: volunteers, no control group, one month.

2 · THE A/B TEST OF THE MINIMAL VERSION

PLANNED · RANDOMISED BY BUSINESS

DESIGN, SIGNED BEFORE LAUNCH	
Hypothesis	If reminders arrive just before each client's usual payment day, more invoices are paid on time, because clients are reminded when they are ready to pay
OEC	On-time rate per business
Guardrails	Reminder opt-outs, client complaints, payment failure rate
Unit · eligible	The business · businesses whose clients have payment history: about **22,000**, of whom about **6,000** are agencies and studios
Sample size	61% baseline, +2 points, 5% significance, 80% power: about 9,400 businesses per variant; there were about 11,000 a side
Window	Businesses assigned in one week, invoices enrolled for 2 weeks, each followed to 14 days past due; readout 5 weeks after assignment
Decision rule	Ship if the 95% interval is above zero and every guardrail holds; stop if it rules out +1 point; otherwise iterate

RESULT, READ BY ASSIGNMENT	
Businesses	control 11,412 · test 11,388
On time	61.2% · 62.1%
Difference	**+0.9 points**, 95% interval **−0.4 to +2.2**
Opt-outs	+0.05 points (within the 0.5% limit)
Complaints	flat
Payment failures	rose in week 10 in **both** groups (the payment partner's change)
Decision	**Iterate.** Minimal version off by default; no marketing claim; a planned agency test next

The first readout counted exposures, not assignments: 11,412 against 10,388, a sample ratio mismatch ($p < 0.001$), and it showed a "significant" +2.4. An AI-drafted summary said ship. The data team re-read the results by assignment, above.

SEGMENT (BY ASSIGNMENT)	BUSINESSES	DIFF., POINTS
Agency or studio	5,996	+2.8
Solo freelancer		+0.3
Consultant		+0.2
Trades		+0.3
Retail		−0.1
Other services		+0.4

UNPLANNED One of six segments examined after the fact; none was named before the test. Only the agency count is in the readout.

GET PAID SQUAD · ESTIMATE

A second test, with agencies as the **planned** segment: **0.5 person-months**, readout 5 weeks after assignment, on the same window. About 6,000 agencies means about **3,000 a side**. Size it yourself before you promise what it can detect.

3 · WHAT ELSE YOU KNOW ABOUT SMART REMINDERS

SOURCE	WHAT IT SAYS
Kano survey 150 VALID	Attractive: A 47%, I 25%, O 18%, M 6%, R 4%. Delight decays as competitors copy it
Payment history	About 40% of client relationships have fewer than three paid invoices: too little history to time a reminder
The competitor	Launched "AI reminders" publicly, with a big marketing push. **No data on whether it works**
Maya's request	Smart reminders this quarter: the full build

Customers, Fit and the Funnel FICTIONAL

Page 3 of 4 · What customers told you, and where they drop off.

1 · PRODUCT-MARKET FIT IN THE NEWEST MARKET 240 RESPONSES

WHO	ANSWERED	"VERY DISAPPOINTED"
Everyone	240	29%
Agencies and studios, 20+ invoices a month	94	**46%**
Solo freelancers	146	18%

The usual benchmark is 40% very disappointed. Survey run mid-quarter, before e-invoicing went live.

What the very disappointed love: getting paid without chasing, and compliant e-invoices without thinking about it.
What the somewhat disappointed agencies who value the same thing ask for most: invoicing in their clients' currencies.

2 · MULTI-CURRENCY · DANIEL

	LAST QUARTER	NOW
Deals waiting on it	One large design agency, about $60,000 a year; decided in week 6; stayed a Won't	**Three agencies**; Daniel's estimate is about $60,000 a year each. No decision dates given yet
Other evidence	None	The PMF segment closest to loving Tallyrow asks for it (above)
Estimate	2 person-months, 4 weeks	Unchanged: 2 person-months, 4 weeks

3 · THE KANO SURVEY 150 VALID RESPONSES · LAST QUARTER

FEATURE	MOST FREQUENT	DISTRIBUTION
Payment link	Must-be	M 52%, O 28%, A 12%, I 8%
Recurring invoices	Performance	O 45%, M 20%, A 18%, I 17%
Smart reminders	Attractive	A 47%, I 25%, O 18%, M 6%, R 4%
Client portal	Indifferent, close to attractive	I 38%, A 31%, O 16%, M 8%, R 7%
Receipt capture	Indifferent	I 54%, A 22%, O 12%, M 6%, R 6%
Late-fee automation	Indifferent and reverse, almost tied	I 34%, R 33%, A 15%, O 10%, M 8%

M must-be · O performance · A attractive · I indifferent · R reverse. Client portal also ran a fake door for two weeks: about **3%** of clients clicked "See all your invoices".

4 · THE PAYMENT-LINK FUNNEL, BY DEVICE · CLIENTS WHO OPENED AN INVOICE, WEEKS 5-11

STEP	DESKTOP	MOBILE	ALL
Opens invoice	900 · 100%	1,100 · 100%	100%
Clicks the pay link	621 · **69%**	539 · **49%**	58%
Starts payment	470 · 52%	350 · 32%	41%
Completes payment	430 · 48%	310 · 28%	37%

Counts are from the seeded sample; the rates are what count.

Most clients open invoices on mobile, and mobile loses the most at the first click.

DESIGN TEAM · NOTE
Likely cause, not yet confirmed: on mobile the pay link sits **below the fold**, the part of the screen you only see after scrolling.

GET PAID SQUAD · ESTIMATE
If it needs fixing: about **1 person-month**, 3 weeks, starting with the design team confirming the cause.

Retention cohorts: businesses still sending invoices 4 weeks after joining: 62% for cohorts that joined before the link, 69% after. A correlation, with a seasonality caveat: a clue, not a result.

Measures, Guardrails and Late Fees FICTIONAL

Page 4 of 4 · How Tallyrow keeps score, and where the tripwires are.

1 · THE METRIC TREE YOU BUILT

North Star: invoices paid on time per week, about 127,000 (61% of about 207,700 invoices due a week).
= weekly sending businesses **34,000** × invoices per sending business **6.1** × on-time rate **61%** (≈ 126,500).
Under the on-time rate: share of invoices paid through the link, reminder coverage, payment success (failure rate, a guardrail).

2 · LAST QUARTER IN THE WEEKLY REVIEW

METRIC	WEEK 1	WEEKS 2-9	WEEK 10	LIMIT
Invoices paid on time, per week	126,697	126,489-128,151	128,359	North Star
On-time rate	61.0%	60.9-61.7%	61.8%	input
Share paid through the link	0%	0% until launch in week 5, then 9-28%	29%	input
Payment failure rate	3.2%	3.1-3.3%	**4.9%** × OVER	4.0%
Reminder opt-outs, clients a month	0.29-0.31%	0.29-0.31%	0.29-0.31%	0.5%
Client complaints per 10,000 invoices	3.9-4.1	3.9-4.1	4.3	6

Week 10: the payment partner changed its card-verification flow. Owner: Get Paid squad. Response, as agreed in advance: escalate to the partner the same day, pause the link's new card flow. Later in the quarter, the link's share reached 31%; a week-11 dip in the on-time rate was a data fault (e-invoices with no due date), fixed to 61.7%.

3 · GUARDRAILS · BASELINE AND LIMIT

GUARDRAIL	BASELINE	LIMIT
Reminder opt-outs	0.3% of clients a month	0.5%
Client complaints	4 per 10,000 invoices	6
Payment failure rate	3.2%	4.0%
Disputes	1.0% of invoices	1.5%

Maya's target, set last quarter: 70% of invoices paid on time by year end.

4 · LATE FEES · TOMÁS

THE GUARDRAIL SPEC YOU DESIGNED	
Measure 1	Complaints and disputes **per 1,000 fees charged**
Measure 2	Churn among businesses that switch late fees on
Stop rule	If complaints pass a set level during rollout, the rollout pauses. Agreed in advance, no debate

WHAT'S TRUE TODAY	
Complaint tracking	**Per invoice only, not per fee.** The stop rule cannot be measured yet
Kano	Reverse 33%, almost tied with indifferent 34%: a third of customers actively dislike it
Revenue	Cost of Delay about $4k a week in fee revenue; the trust cost is not in that figure

GET PAID SQUAD · ESTIMATE
Tracking complaints and disputes per fee: **1.5 person-months**, 6 weeks. The feature itself: 2 person-months, 4 weeks.

Every number in this pack is invented for teaching, and every one comes from Tallyrow's last quarter. If your pack relies on a number that is not here, mark it as your estimate and say how you'd check it.
