The Decision Pack Scorecard

Ten checks. Each one is a mistake that loses the room.

CHECK YOUR PACK BEFORE THE DEFENCE

#	CHECK	PART	✓
1	Every date-bound item has a last safe start week, and the plan respects it	1	☐
2	Two models used; every disagreement explained by the line of the bill each puts on top	1	☐
3	Musts at or under about 60% of capacity; Won't items named "this time"	1	☐
4	Every confidence value has its evidence written next to it	1 · 2	☐
5	Unplanned evidence (for example a segment found after the fact) is treated as a hypothesis	2	☐
6	The test card's pass criterion was written before any result	2	☐
7	Every committed item has an input metric and a guardrail with a limit and an agreed response	3	☐
8	The experiment brief names its unit of randomisation and outcome window	4	☐
9	The memo leads with inputs, not scores, and states the cost of the alternative	5	☐
10	Nothing in the pack relies on a number you can't trace to the data pack	all	☐

HOW TO USE IT

Tick a row only when you can point to the line in your pack that proves it. Better still, hand the pack and this page to a colleague and let them tick it. **When every row has a tick, watch the defence and compare your pack with the worked answer.** Yours may differ, and that's fine, as long as your inputs support it.

Same models, harder room. Bring the inputs.
